

NET SatisFAXtion Connectivity Options

FaxBack's NET SatisFAXtion VoIP fax server can be deployed in any telephony environment. The Small Business version will support one connectivity option at a time, while the Enterprise version can support multiple connections for high availability. Since these boardless solutions do not require dedicated fax hardware, the NET SatisFAXtion server can be virtualized. Feel free to contact your Account Executive to help decide which fax connectivity deployment is best for your needs and environment.
